

I Zubizarreta, P Galán-García, E Arruti and J Perez
Ubikare - Clinical Data Analytics and Home Health Care

Motivation

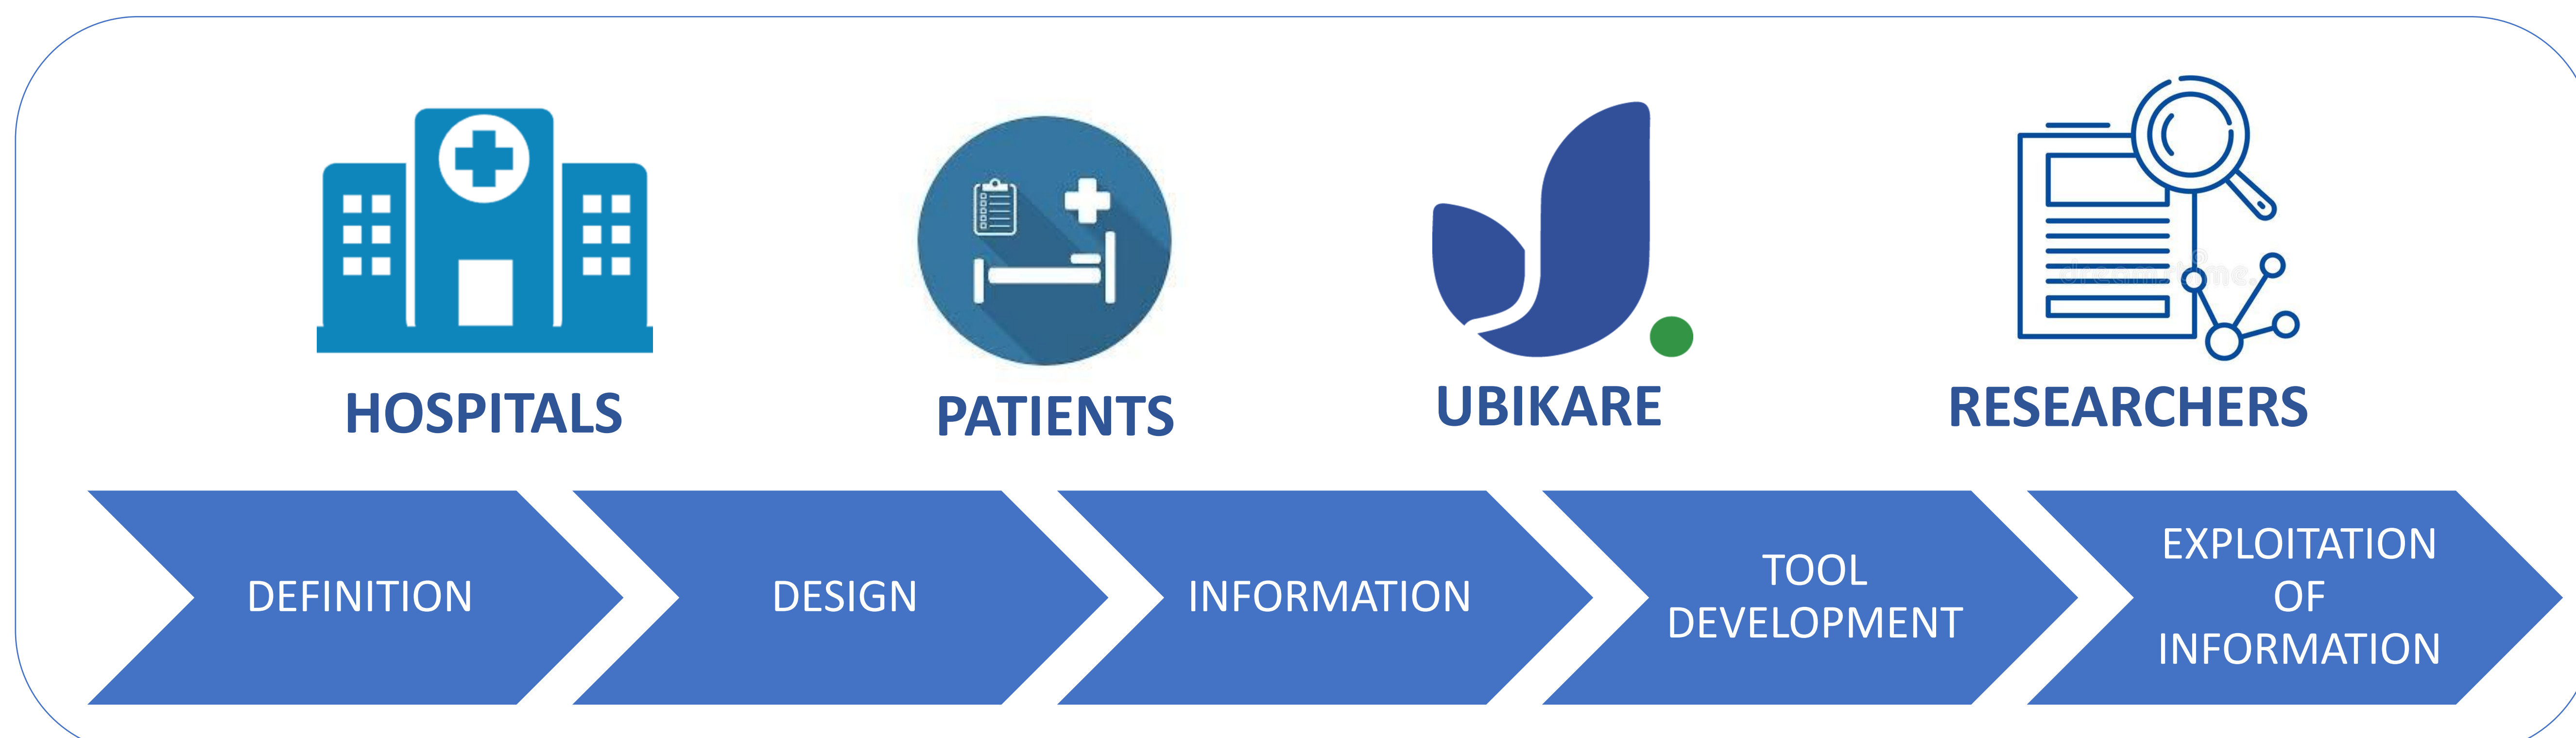

- 30th December 2019 ● China discovers a **new pneumonia**. SARS-CoV-2
- 21st January 2020 ● China reports 4 **deaths** and 200 **new cases**
- 31st January 2020 ● **Spread** in 5 countries. WHO declares health emergency
- 11th March 2020 ● WHO declares Covid-19 **global pandemic**
- Allocation of public funds for research on Covid-19
- **Collapse** of hospitals, **misinformation** in hospitals, **lack of coordination** and **communication** between them
- April 2020 ● Ubikare together **with hospitals**, develop a solution for the management of ICU patients with Covid-19

RegCovid19 goals and main features

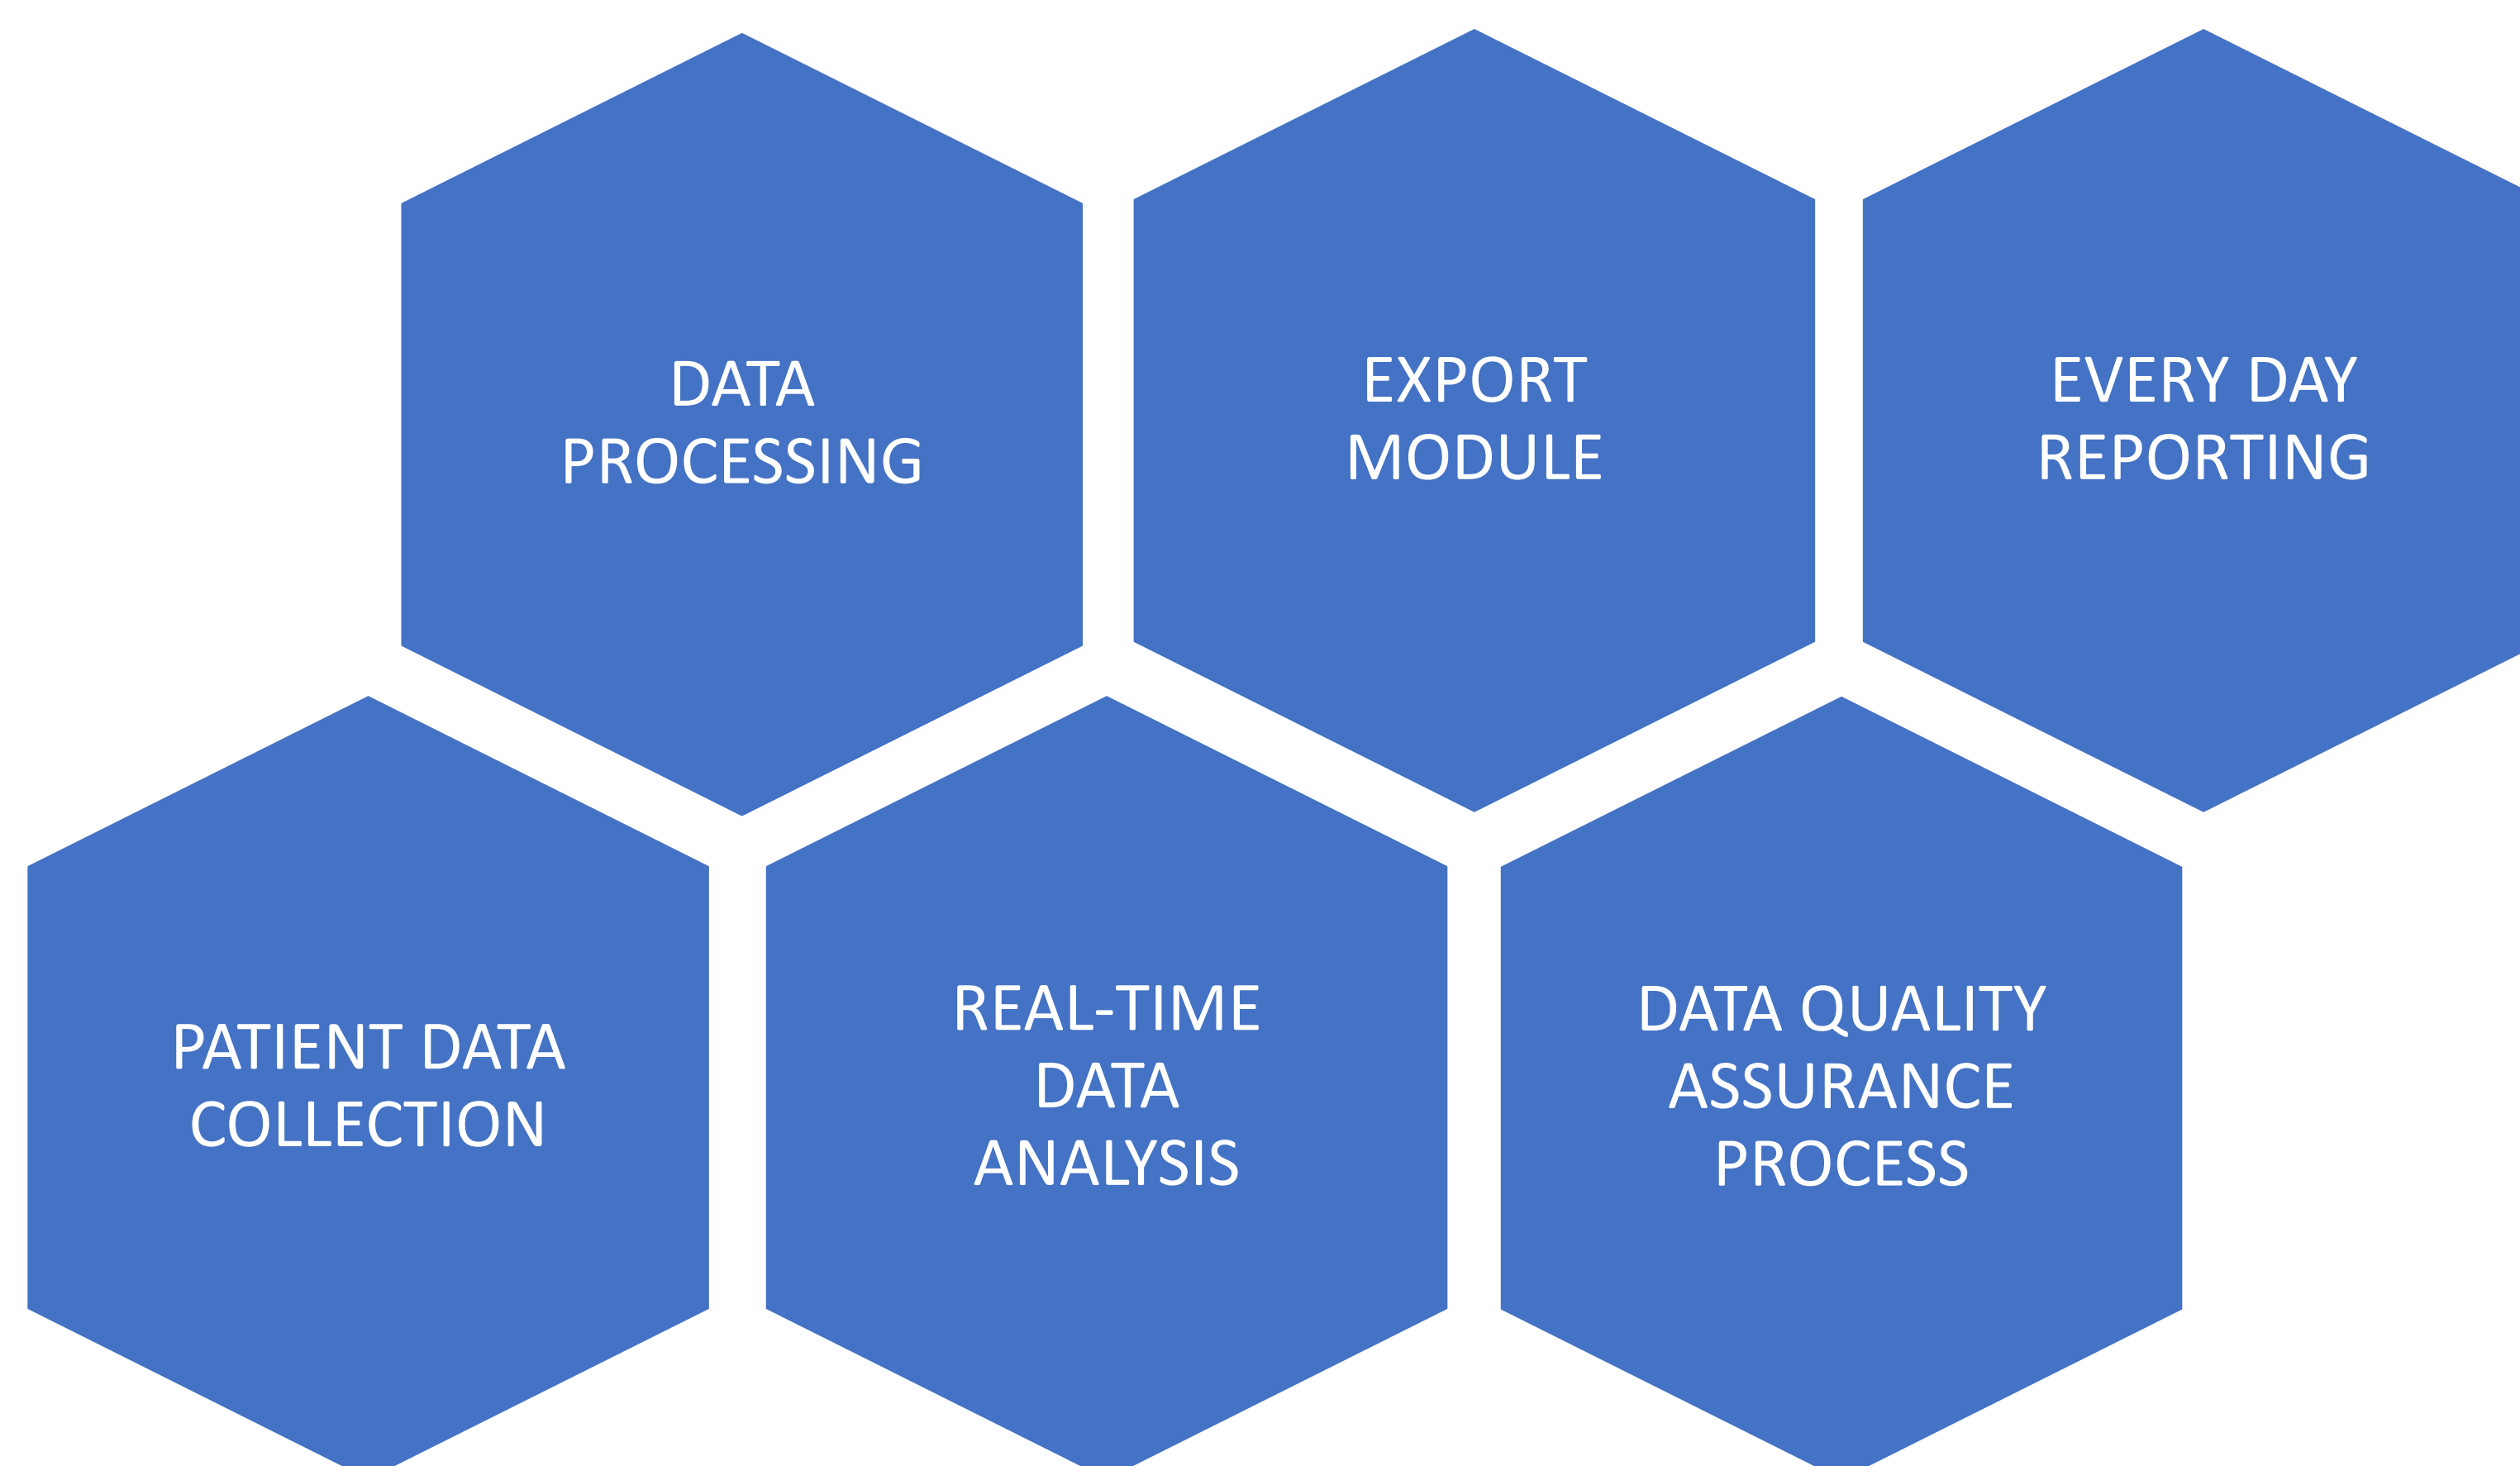

- **RegCovid19** is the **Electronic Data Collection (EDC)** tool designed by Ubikare in April 2020.
- Main objective → **provide to healthcare personnel a simple and efficient view of the evolution and situation of each patient, with their corresponding severity scales.**
- More than **35 hospitals** in **Spain** and **Andorra** participated on RegCovid19.
- Information of more than **11 thousand patients**
- RegCovid19 software has a **data analytics component**, to **process information in real time**

RegCovid19: a collaborative project

From the idea ...

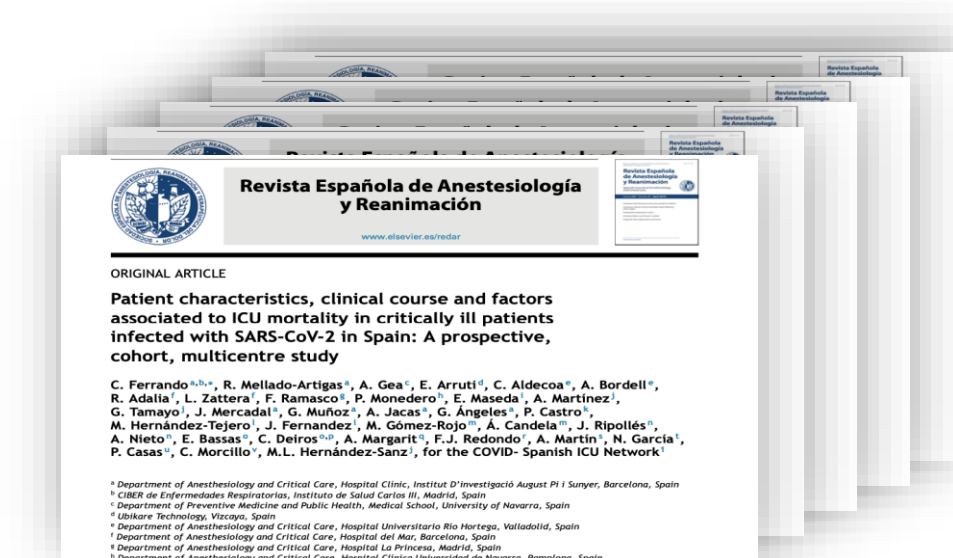

... to solution

Conclusions

- **RegCovid19** improves the **decision-making process**
- Researchers could obtain **new conclusions every day** and reformulate **new hypotheses**
- **Real-time data processing**

- **RegCovid19** incorporates an exportation tool → it allows to **share information** between hospitals and researchers
- It **accelerates the investigations**:
 - New conclusions every day
 - New hypothesis reformulations
